

Pooria Rajabzadeh

SENIOR SOFTWARE DEVELOPER — FULL STACK

Waterloo, ON · +1 (519) 573-0793 · p.rajabzadeh92@gmail.com · linkedin.com/in/pooria-rajabzadeh ·
github.com/lordpooria · stackoverflow.com/users/10138279

CORE SKILLS

FRONTEND

React, Next.js, TypeScript, React Native, Storybook, Tiptap, Rollup

BACKEND & DATA

Nest.js, Node.js, Python, GraphQL, PostgreSQL, BigQuery, AWS, Flask

RELIABILITY & OBSERVABILITY

BigQuery dashboards, custom structured logging, threshold alerting, Slack alert pipelines, incident response, postmortems

AI TOOLING

Claude Code, Cursor, Codex — AI-assisted review, refactoring, test generation, prototyping; team-wide rules and CI review agents

TESTING & DELIVERY

Playwright, Nx monorepo, CI/CD, GitHub Actions, Azure Pipelines

PERFORMANCE

Core Web Vitals, server-side rendering, SEO, Segment, Mixpanel

PROFESSIONAL SUMMARY

Senior software developer with 8+ years shipping web, mobile and platform products end to end, deep in React, Next.js and TypeScript with backend work in Nest.js, Node and Python. Owns reliability as much as features: builds the logging, dashboards and alerting that catch authentication failures before users report them, and has worked through tens of production incidents from detection to postmortem. Uses AI development tooling — Claude Code, Cursor and Codex — daily, and builds the rules and automation that make it dependable for a whole team.

PROFESSIONAL EXPERIENCE

Tali.ai

CURRENT

April 2023 – Present

Senior Software Developer · AI-assisted clinical documentation platform

- Drove platform reliability with the core engineering team through **tens of production incidents** — root-cause analysis, fixes and postmortems — cutting repeat authentication failures by roughly **70%**.
- Built the observability layer for authentication and session flows — custom structured logging, **BigQuery** dashboards and threshold alerts posted into a dedicated Slack channel — cutting detection of user-facing sign-in failures from **hours of support tickets to minutes**.
- Turned ad-hoc escalations into a repeatable incident process — alert routing, triage ownership and follow-up tracking — shortening average time to resolution by about **45%**.
- Use **Claude Code, Cursor and Codex** daily for generation, refactoring, test writing and prototyping, and built the internal tooling, rules and prompt library that made the workflow repeatable team-wide — cutting typical feature turnaround by around **35%**.
- Shipped AI-assisted code review into GitHub Actions, screening every pull request for security and code-quality issues before human review, and authored Cursor rules encoding the design system so generated UI stays on-system and designers can contribute working interface code.
- Migrated the platform to **Next.js 15** across every breaking change with no customer-facing downtime, cutting first contentful paint by **50%**.
- Built the product applications on an **Nx monorepo** with Storybook, Playwright coverage and the Segment/Mixpanel analytics pipeline, and moved the marketing site to Webflow so content ships without engineering time.

EDUCATION

M.Sc. Electrical Engineering

University of Tehran · 2017

B.Sc. Electrical Engineering

University of Tehran · 2015

LANGUAGES

English — professional

Persian — native

Digikala

April 2021 – April 2023

Frontend Developer · e-commerce marketplace

- Refactored a legacy jQuery product serving **10M users** to React, cutting page load time by **40%** and removing the recurring downtime the old stack produced.
- Built an internal component library with Rollup and tree shaking, reducing shared bundle size by about **25%** across consuming products.
- Documented the library in Storybook and drove adoption across multiple product teams, standardizing UI patterns in a large multi-team engineering organization with shared release processes.

Apsy.io

May 2019 – December 2021

Front-end Developer · automated app-building platform

- Developed a Flask service that automated UI code generation, and supported the AI team by extracting and formatting Adobe XD files into structured JSON.
- Created the platform's Azure CI/CD release pipeline, replacing manual releases with a repeatable automated process.
- Shipped a project boilerplate that cut new-project start-up time by **30%**.
- Built the company website in Next.js with incremental static regeneration, extensive animation work and an embedded Adobe XD preview.
- Designed the online coding interview and offline exam used in the company's hiring process.
